

Bosch 100 Series FDBM Demo Mode

Step 1: Plug in your new Bosch refrigerator.

Step 2: Once your refrigerator is plugged in, the control panel on the front will start to illuminate with a bar of light that will move left to right letting you know it's starting up and powering on. *See below.* This is normal and should take about 60 seconds.

Note: You will know the unit is ready once you hear a beep inside the dispenser, the light bar has stopped illuminating and the controls on the dispenser have illuminated.

Step 3: Once the controls are fully illuminated, touch the Fridge temperature (this will be located on the left side). *See below.*

Step 4: Once selected, then press and hold the “Super” button to the left of the fridge temperature for about 8-10 seconds. *See below.*

Step 5: After you hear a beep, the freezer temperature should display the number “88”. This would indicate you are now in demo mode. *See below.*

Note: The number 88 will only be shown for a few seconds and then return to “0”. This is normal.
